Tech info

Silk screen prints

We use silk screen printing for our bottles, with a separate screen for each print colour.

File specifications

- Adobe Illustrator 8.0 or higher (vector ai file)
- Adobe Photoshop 5.0 or higher (resolution 300dpi)

Our preference is for vector files suitable for Adobe Illustrator.

Only photos can be provided in Photoshop or as PSD, JPG, or TIFF.

Per email, max. 10MB.

Fonts

Always change letters to outline

Print area

- Bottle 450ml: 195 x 140 mm
- Bottle 500/550ml: 235,5 x 100 mm
- Bottle 750ml: 235,5 x 100 mm & 235,5 x 29 mm (upper print area)

Distance between upper and lower part of imprint of the 750ml bottle is 95 mm (heart to heart print).

All-round printing

With an all-round print the beginning and end of the print area will come together at the back causing a blemish line. This must be accepted. As an alternative you can choose a 5 mm opening.

Top print area 750ml bottles

When printing on the upper part of the 750ml bottle, the top print is considered additional printing colors. So, 2 colors above and 2 below means a total of 4 printing colors.

Full colour process print: CMYK

It is possible that a design must be made up partially in cmyk and a part in spot colours. For example, small text cannot be made up in cmyk and needs to be printed in a pantone colour. To ensure your calculations are correct, please always send us the artwork to check the number of print colours required.

Printing full colour

When printing a full colour design, where the colours meet a 0,5 mm tolerance in closure must be accepted. With the full colour printing process (CMYK), the result will be matte, pixelated and colours can slightly deviate from the visual proof. Our raster size is 34 dpi.

Printing multiple pms colours

When printing a multiple colour design, where the colours meet a 0,5 mm tolerance in closure must be accepted. With PMS printing, the result is a shiny print. Colours created from a part of a PMS colour will be pixelated. Our raster size is 34 dpi.

We use the Pantone Solid Coated colours. Only these colours can be printed.

Printing on coloured bottles

To print a pantone colour onto a coloured bottle, it's necessary to print a white underlay first. No white underlay is required for grey tints, gold, silver and white. In some cases, an outline is visible and must be accepted. Please ask for details. The white underlay is calculated as one extra print colour and one extra screen. If white is already part of the design, there is no extra white underlay required. If in doubt, please contact us for information.

Dark bottles + Top of Shanti cap

Dark bottles and the Shanti caps are unfortunately very sensitive to scratches and scuff marks. This must be accepted.

Templates

We offer free of charge templates to create a design.
